

Guard Tour

Guard Tour is a seamlessly integrated, logged and recorded via Security Management System, walkthrough inspection of a security facility.

The Guard Tour occurs hourly between established times on site, and is supported by software and hardware integration.

JFE Security guard tour monitoring is a state of the art and, real-time tour technology. It enables workers to easily communicate with the control room via the touch of a button and sends reports back to control server immediately in real-time using GPRS / GSM data transmission. The following functions are built into the system:

- Tour monitoring: enables monitoring of mobile worker time and attendance in Real Time. Report data is transmitted through GSM/GPRS to the control server, allowing real time updates of the guard activities on a web based live patrol monitoring system.
- Isolated Worker: the embedded panic button allows immediate communication with a control room in case of emergency - tremendously improving the safety and security of your employees.
- Biometric Shift start/stop: Our build in biometric fingerprint reader lets your employees or contractors sign on and off a site or a job by utilizing the start/stop button thereby eliminating any possibility of buddy punching.
- Emergency calls: a control room can call an employee in order to reassure them that assistance is at hand or to transmit vital information.
- Monitoring application: access to reports anytime and anywhere. Fully secure with remote automated data backups.
